

Lights designed for railway application

Technical integration of the lamp into the robust world of freight wagons!

The light has especially been designed and developed for its use in closed car wagons. All components have been designed and successfully tested in authorized labs for being used in rolling stock. More than 24.000 lights are in regular use on both, the German and the European railway network.

The materials of the lamp housing are moisture-resistant and in the protection class of IP 65 i.e. the lights are particularly suitable for being used in railway vehicles. Other types of the lights have been designed for being used in open car wagons.

Item number: 40.0270.59

Technical data:

| | |
|-------------------|--|
| Voltage: | 230 V AC (18 W), 24 V/110 V DC or LED technology (8.5 W) |
| Lamp: | T8, l = 590 mm, G 13, 3,000 – 6,000 K |
| Cover: | colorless, break-proof and shock-resistant copolyester |
| Protection class: | IP 65 |
| Dimensions: | 653 x 61 x 135 mm (length x width x height) |
| Standards: | DIN EN 50155, DIN EN 45545 |
